## **CLAIMS**

A film made from a polyester resin composition comprising 10 - 90 wt% of polyester (A) comprising ethylene terephthalate
 as a main constituent component and 90 - 10 wt% of crystalline polyester (B) different from said polyester (A), which film shows a half value width of recrystallization peak obtained by a differential scanning calorimeter (DSC) by lowering temperature of not more than 0.25.

10

- 2. The polyester film of claim 1, wherein the polyester resin composition comprises 10 70 wt% of polyester (A) comprising ethylene terephthalate as a main constituent component and 90 30 wt% of crystalline polyester (B), and the crystalline polyester (B) is a polyester selected from polybutylene terephthalate (PBT), polytrimethylene terephthalate (PTT) and polyethylene-2,6-naphthalate (PEN).
- 3. The polyester film of claim 1 or 2, wherein a peak
  20 temperature (Tc2) of the recrystallization peak is not less
  than 180°C.
  - 4. The polyester film of any of claims 1 3, wherein the polyester film has a reduced viscosity of not less than 0.80.

25

- 5. The polyester film of any of claims 1 4, which is used for laminating on a metal sheet.
- 6. The polyester film of any of claims 1 4, which is used 30 for form processing.
